# Measuring Guide & Product Specs

## Planning for the Perfect Fit

Don't worry. It's easy, and we're always here to help if you need it.

Just follow the simple steps below before you meet with our designer!

### Replacing with the same size?

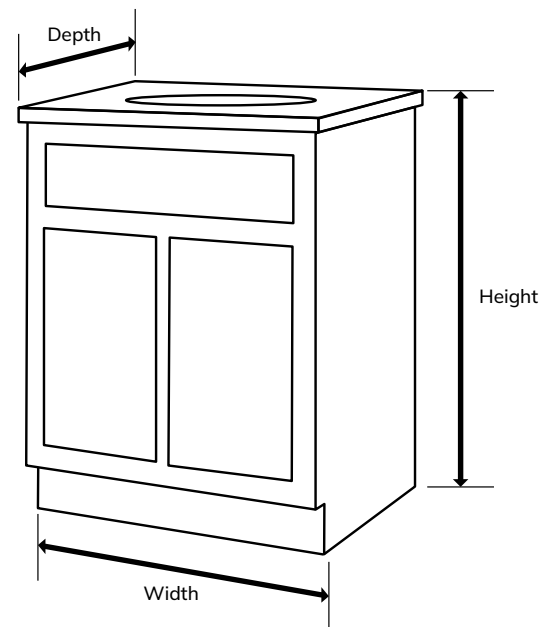

If your new vanity will have the exact same dimensions as the vanity you're replacing, then you already know it will fit in the available space. In this case, all you will need to do is double check the height, width, and depth measurements to make sure they match. Then, write them down while taking note of the new model of vanity with matching measurements that you'd like to install.

### Measure Your Space

**Width:** Measure the entire available space from wall to wall. Then measure any kind of obstruction that may intrude on the space like an open shower door or bathroom door. Vanity sizes can range from a minimum of approximately 17" wide to a maximum of approximately 72" wide.

**Depth:** Measure from the back wall considering the distance needed for drawers to open while still leaving adequate space for anyone occupying the space in front of the vanity as well as shower or bathroom doors to open without being obstructed. Plan for at least 30" of clear space in front of the vanity.

**Height:** Measure from the floor up while taking into account the height you'd like your vanity top to be at, which is generally in the range of 30"-36." If your vanity will be mounted on a wall, determine the space you would like to retain above and below by subtracting the vanity height from the wall height and dividing the remaining space so that the space below the vanity plus the height of the vanity equals your desired countertop height. Check to make sure there is also adequate room for outlets, accessory cabinets, or mirrors you would like to install or retain on the wall above the vanity.

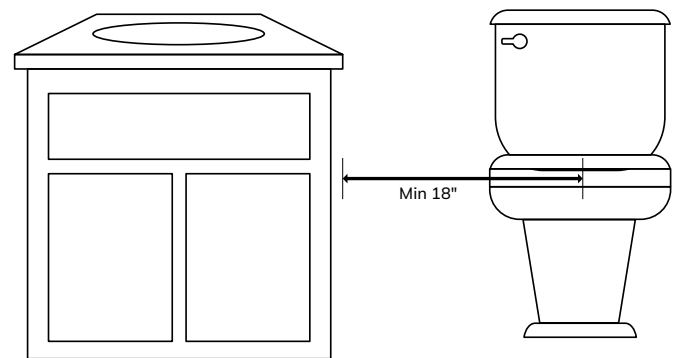

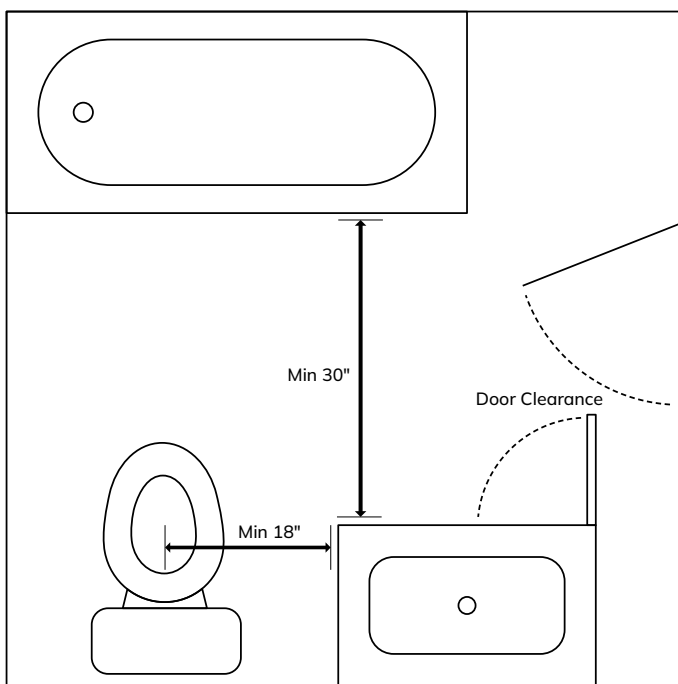

# Measuring Guide & Product Specs

## Important Considerations

- Don't forget about clearance for occupants, doors, and drawers, and add a couple of inches of extra space just to be sure.
- Maintain at least 18" from the vanity side to the center of the toilet and at least 30" from the vanity front to anything in front of it.
- Double check to ensure your spacing is compliant with building codes.
- If you're not replacing your existing wall cabinets or mirrors, make sure your vanity will match the scale of your current installations.
- Account for existing elements like outlets, switches, and plumbing to make sure they will work with the vanity you're hoping to install.
